B. **ACADEMIC HISTORY**

6. i. Research Endeavors

My research examines the development of the social, psychological, and behavioral sciences in various contexts, i.e., intellectual, biographical, disciplinary, political, and institutional. Most of my work concentrates on the period since World War Two, especially the Cold War era. I am particularly interested in the following issues: scientific boundary work for the social, psychological, and behavioral sciences; controversy over their intellectual foundations, normative implications, and scientific identities; the evolution and impact of private and public patronage for research in these fields; debates about their social relevance and public policy uses.
